A note on publication venues: in my primary area of research, Human Computer Interaction, the ACM Conference on Human Factors in Computing Systems (CHI) is considered one of the best forums for dissemination of research results and covers the broad spectrum of research in Human Computer Interaction. The ACM Symposium on User Interface Software and Technology (UIST) is of similar quality but focuses on a particular sub-area of the field: interactive techniques and devices. Papers in these conferences are refereed as full papers and have an acceptance rate of around 15-25% each year.
